PORTFOLIO PROJECT

Support Team *KPI Dashboard*

Monthly operational analytics for a 11-agent support team built on the Kaggle Customer Support Ticket dataset

CSAT | SLA % | FCR % | Utilization | Pending Rate | Ticket Vol

Pratham Singh · Excel · Pivot Tables · Kaggle Dataset

Problem & Objective

The Problem

Support teams generate large volumes of operational data daily — but without a structured view, managers can't:

- Identify which agents need coaching vs recognition
- Track SLA compliance before breaches escalate
- Spot Monthly trends in CSAT or pending backlogs
- Tie ticket volume spikes to service quality drops

The Objective

Build a Monthly Excel dashboard that gives ops managers a single-screen view of team performance:

- 6 KPI cards for at-a-glance performance health
- Agent-level performance table with conditional formatting
- Trend charts for CSAT, SLA, and ticket volume
- Interactive slicers to filter by month and agent

Dataset & Methodology

Dataset

Kaggle — Customer Support Ticket Dataset

Rows	8,469 support tickets
Agents	11 (weighted random distribution)
Period	Full calendar year
Source	suraj520 / Kaggle

Note: Agent_name column simulated using random-weighted assignment to create realistic productivity variance

How KPIs were built

CSAT Score
AVERAGEIF on satisfaction rating (1–5)

SLA Adherence %
Flag Critical/High tickets not closed as breach

FCR %
% of tickets with Ticket Status = Closed

Pending Rate
% of tickets in Pending Customer Response

Avg Utilization
Tickets per agent per month ÷ 160 capacity

Ticket Volume
COUNTA of Ticket ID — no engineering needed

Dashboard Preview

3.4	75%	33%	54%	34%
CSAT Score	SLA Adherence %	FCR %	Avg Utilization	Pending Rate

Agent-Level Performance

Agent	Ticket Vol	CSAT	SLA%	FCR%
Aisha	1670	3.33	24%	34%
Arjun	372	3.58	24%	33%
Divya	415	3.38	23%	38%
Karan	390	3.23	28%	33%
Meera	417	3.39	24%	37%
Mohit	905	3.37	23%	33%
Neha	457	3.36	25%	28%
Priya	827	3.51	27%	30%
Rahul	414	3.33	27%	34%
Ravi	1323	3.43	25%	32%
Sara	1279	3.42	25%	31%

8469

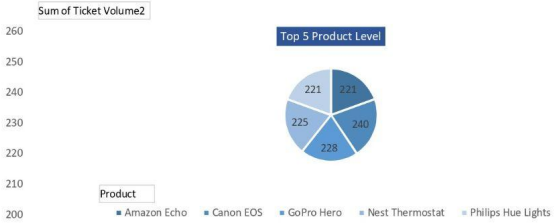
Ticket Volume

Priority-Status Level

Priority	Closed	Open	Pending
Critical	726	692	711
High	705	704	676
Low	644	696	723
Medium	694	727	771
Total	**2769**	**2819**	**2881**

Issue Type Level

Issue Type	Ticket Volume
Billing inquiry	1634
Cancellation request	1695
Product inquiry	1641
Refund request	1752
Technical issue	1747



Learnings & Next Steps

What I learned

1. Handling datasets with no native agent column — engineered assignment with MOD-weighted distribution for realistic variance
2. Deriving SLA compliance from status + priority when timestamp data was unreliable — a real-world data quality decision
3. Dropped AHT after identifying years-apart timestamps between creation and resolution — documented as a data limitation
4. Building combo charts with dual axes to correlate volume spikes with pending rate increases
5. Connecting slicers to multiple pivot tables for a fully interactive single-screen dashboard

Planned enhancements

SQL	Rebuild KPI aggregations in SQL — scalable to millions of tickets
Power BI	Migrate to Power BI with DAX measures, live refresh, and drill-through pages
Python	Automate agent assignment with clustering instead of MOD formula
Predictive	Flag agents at risk of SLA breach before end of month using trend logic
